# MALONEY'S Dwarf Fruit Trees

For you who want to grow more in less space, Dwarf Fruit Trees: Apples, Pears and Plums, that are hardy and dependable performers, is big news.

The fruits are the same—as large, as well colored and flavored, as that grown on standard size trees.

Only the trees are dwarf. They're made so, because the tops are grafted to a dwarfing understock, which sets a limit on the height and spread of the tree, but does nothing to its fruit.

# Home Evergreens

All evergreens are taken up expertly to secure the tender roots, the soil removed, and then the roots dipped in Transplantone and balled and burlapped in wet moss. By this method, we are now able to eliminate 50 to 60 pounds of soil, making low cost express shipments possible. This method also insures excellent growth and quicker root action. In planting, remove burlap and use peat moss in hole around roots.
